

Weigh Trains on the Move with Confidence

In-Motion Train Weighing Systems for Efficient, Safe, and Reliable Freight Operations

In busy rail freight terminals, the ability to accurately weigh trains quickly and efficiently is essential. Without real-time data on a train's weight, overloading can go unnoticed, putting safety and infrastructure at risk.

The Weighwell **Portable Train Weigher (PTW)** is a patented rail scale that helps freight terminals weigh trains at speeds up to 3mph (5kph). With an easy installation in under 15 minutes, our system offers a non-intrusive, reliable solution that reduces downtime and keeps your terminal operations flowing smoothly.

Trusted worldwide since 1997, the **PTW** has been rigorously tested in some of most challenging environments, ensuring accurate and repeatable weighing results for any freight operation. The PTW has an achievable accuracy of 2-3% or better, subject to site conditions.

Flange-friendly
patented design

Division size of
10kg

No track
modifications

Fits between rail
fastenings (556mm)

Eight Reasons to Choose our In-Motion Systems

Weigh up to
40000kg per axle

Battery powered
operation

Hire options
available

Compatible with
different track gauges
