

Reliable Readings, Instant Insights

Two Indicators, One Tried and
Trusted Solution

Without precise weighing data, Rail Engineers and Depot Managers struggle to ensure optimal rolling stock performance. A fast, accurate and easy-to-use weighing solution is crucial, one that delivers instant results without disruption.

Our PTW Indicators are purpose-built for both static and in-motion weighing, providing the essential data needed for safe and efficient rail operations. The indicators enhance the weighing process through:

A simple, intuitive operation.

Immediate results via USB or printout.

Battery powered for remote locations.

A carry-case for harsh environments.

In-motion Indicator

The In-Motion Weighing Indicator is equipped with a physical keypad and is capable of weighing four-axle, two-axle or mixed wagon rakes. It supports multiple weighing units with kilograms (10kg), pounds (50lb), and tonnes (0.01t).

Static Indicator

The Static Weighing Indicator features a touchscreen interface with an integrated QWERTY alphanumeric keypad. It displays wheel weights for up to four axles (eight wheels) and provides weighing results in kilograms (10kg increments).

Reach out to us today for a demonstration and explore how our **Train Weighing Indicators** can enhance your operations.
